Land Condition Trend Analysis (LCTA) Program Data Dictionary: Version 1.0

by

William L. Sprouse and Alan B. Anderson

This data dictionary is a logically organized repository of information describing all relevant land condition trend analysis (LCTA) data, including data characteristics, relationships, and usage. The data dictionary contains detailed information required to interface effectively and use LCTA databases.

This document provides a complete description of each LCTA database entity and relationship, structured query language (SQL) commands to construct a new LCTA database, a database scheme diagram to help visualize the information structure, and SQL commands to migrate early versions of the database into the current structure.

USER EVALUATION OF REPORT

REFERENCE: USACERL ADP Report EN-95/03, *Land Condition Trend Analysis (LCTA) Program Data Dictionary: Version 1.0*

Please take a few minutes to answer the questions below, tear out this sheet, and return it to USACERL. As user of this report, your customer comments will provide USACERL with information essential for improving future reports.

1. Does this report satisfy a need? (Comment on purpose, related project, or other area of interest for which report will be used.)

2. How, specifically, is the report being used? (Information source, design data or procedure, management procedure, source of ideas, etc.)

3. Has the information in this report led to any quantitative savings as far as manhours/contract dollars saved, operating costs avoided, efficiencies achieved, etc.? If so, please elaborate.

4. What is your evaluation of this report in the following areas?

a. Presentation: _____

b. Completeness: _____

c. Easy to Understand: _____

d. Easy to Implement: _____

e. Adequate Reference Material: _____

f. Relates to Area of Interest: _____

g. Did the report meet your expectations? _____

h. Does the report raise unanswered questions? _____

i. General Comments. (Indicate what you think should be changed to make this report and future reports of this type more responsive to your needs, more usable, improve readability, etc.)

5. If you would like to be contacted by the personnel who prepared this report to raise specific questions or discuss the topic, please fill in the following information.

Name: _____

Telephone Number: _____

Organization Address: _____

6. Please mail the completed form to:

Foreword

This work was performed for the Office of the Directorate of Environmental Programs (DAIM), Assistant Chief of Staff (Installation Management) (ACS(IM)), under Military Interdepartmental Purchase Request E87930242, "Land Condition Trend Analysis Database Management." The technical monitor was Dr. Victor E. Diersing, DAIM-ED-N.

The work was performed by the Natural Resources Division (EN), of the Environmental Sustainment Laboratory (EL), U.S. Army Construction Engineering Research Laboratories (USACERL). The USACERL principal investigator was William L. Sprouse. Dr. William D. Severinghaus is Chief, CECER-EN. William D. Goran is Chief, CECER-EL. The USACERL technical editor was Agnes E. Dillon, Information Management Office.

LTC David J. Rehbein is Commander and Acting Director, USACERL. Dr. Michael J. O'Connor is Technical Director.

1 Introduction

Background

The U.S. Army Construction Engineering Research Laboratories (USACERL) developed the Land Condition Trend Analysis (LCTA) Program to provide standardized data for natural resources management and land stewardship on military installations. The LCTA program is a standardized method of natural resources data collection, analysis, and reporting designed to meet multiple goals and objectives. LCTA uses information on topographic features, soil characteristics, climatic variables, vegetation, and wildlife resources to characterize an installation's natural resources in a cost- and time-effective manner. The information will (1) assist installation managers with making decisions on best use of land, scheduling of military activities, protection of threatened and endangered species, and long-term environmental planning; (2) provide officials at all levels with standardized natural resources inventory information for installations across the continental United States and overseas.

LCTA is an Information Management System (IMS). LCTA IMS is a series of Army-developed executable programs, data storage schemes, and commercial off-the-shelf (COTS) products that span two operating systems (MS-DOS/Windows and UNIX). This is the system for Army Conservation Pillar natural resources information and processing capabilities. The object of the LCTA IMS is to provide user friendly automated programs to collect, analyze, interpret, and report natural resources data and land use impacts for decision making.

Components of the LCTA IMS include:

- automated data collection techniques
- imagery processing for remotely sensed images and spatial data
- multimedia and hypermedia applications
- global electronic networking between installations headquarters and a natural resources support center
- relational database management system
- LCTA users interface.

Automated data collection techniques provide improved data accuracy. Imagery processing is beneficial to data extrapolation. Multimedia and hypermedia applications provide textural and graphics information. Global electronic networking simplifies update distribution, lessons learned, and data standards. The LCTA users interface program documentation enables land managers to automate data analysis tasks and provide easy integration with other COTS programs currently in use at government installations.

An information system is "A system that consists of people, machines, and methods for organizations to accomplish specified operations on data that represent information. An information system may include data devices, office machines, communications equipment, peripheral equipment, and associated data media and accessories" (Newton and Wahl 1993). The LCTA IMS is designed to give installation environmental personnel the equipment, resources, and methods to meet the natural resources management and land stewardship issues on the installation. LCTA IMS utilizes commercially available software to reduce program development costs. Army developed software is used where specific needs are not met from other COTS software.

Objective

The objective of this manual is to provide the necessary information for users of the LCTA database to initiate, understand, and interpret the data contained in the database.

Mode of Technology Transfer

The LCTA database is provided to installations that have initiated or plan to initiate LCTA field sampling methodology. In addition to the database, the LCTA users interface program documentation, which facilitates use of the data, and the standard commercial database management software also are provided. The Office of the Directorate of Environmental Programs (DAIM), Assistant Chief of Staff (Installation Management) (ACS(IM)), sponsors annual LCTA training workshops conducted by USACERL staff, for military resource management personnel. The LCTA database is supported by newsletters, documentation, training programs, user support center, and hands-on experience.

2 Database Description

The main text of this document provides a general overview of the database structure for each of the major field sampling data groupings. Each portion of the database structure is described in terms of the field sampling methodology associated with the data and the relationships of the data with other data. Quality assurance quality control (QAQC) features incorporated into the database also are discussed.

A migration strategy to convert earlier versions of the database into the current structure also are described in the main text of this document. The migration strategy is a series of SQL commands that convert existing LCTA databases to the current structure. These commands implement the QAQC features discussed in this document.

Appendix A contains an entity relationship (ER) diagram showing the LCTA database schema. This diagram helps the reader visualize the database structure described elsewhere in the document.

Appendix B contains a detailed description of each data base entity (table). Entity descriptions are in alphabetical order for easy access. Appendix C contains an alphabetical list of each LCTA database data element. Detailed information on each data element includes a description of the data, the data type, if data is required, if the data is derived from other data, and valid data values. These detailed entity and element descriptions and the ER diagram in Appendix A allow the reader to incorporate detailed database information into the general descriptions in the main text as needed to more fully understand certain aspects of the database.

Appendix D contains a series of SQL commands that completely describe the LCTA database. These statements allow a database manager to construct a new database from only these SQL statements, and they also define the data interface for software developers, systems maintainers, and data managers.

A relational database model, or a Relational Data Base Management System (RDBMS), represents data as tables, with records stored as rows (observations) and data elements (variables) stored as columns of the rows. Tables also may have relationships with other tables. These relationships can have two forms: join

relationship and referential integrity constraints. Tables with join relationships have data elements in common and allow common data to be joined by use of a Structured Query Language (SQL) statement. Tables with referential integrity constraints can be defined as parent and child tables. A parent table controls the entry of data into the child table. Specific data must be present in the parent table before it is allowed in the child table. In relational theory the parent table has a primary key and the child table has a foreign key. An example can help to explain this issue. When point data is collected on an LCTA plot information about the location, type of vegetation and measurement date are recorded. To eliminate the need of repeating this information for every observation of point data for ground vegetation, a relationship is defined between the two tables PLOTSURV and GNDCOVER. The plot number and the recording date are defined as the primary key variables. A well designed RDBMS structure will eliminate redundant data and ensure data integrity. This document discusses the LCTA database and includes enhancements to the current database design to take full advantage of relational database theory and protect the integrity of the data.

The LCTA database can be divided into nine distinct components:

- plot information data
- land use data
- vegetation data
- wildlife data
- climate data
- soils data
- supplementary information
- summary data
- validation tables.

These components reflect information about the natural resources of the installation collected at LCTA plots. To simplify the understanding of the LCTA database data dictionary, the database will be represented first as its distinct components with little mention of the relationships between tables. The database then will be brought together to show the overall structure. The following description of the LCTA database consists of the database schema released with version 1.0 of the LCTA user's interface. In addition, changes to the database to enhance the usability and data integrity have been added. For a list of the changes refer to Chapter 3, Database Schema Updates. The migration strategy for making the changes to the database will be discussed later.

A brief description of the collection methodology will precede each section. This will give the reader a better understanding of the LCTA data. This information has been

taken from *U.S. Army Land Condition-Trend Analysis (LCTA) Plot Inventory Field Methods* (Tazik et al., February 1992), which gives more detailed information about the LCTA data collection techniques. A complete LCTA data dictionary will be presented at the end of the database discussion.

LCTA Field Methodology

The structure of the LCTA data dictionary is largely controlled by the types of data collected and the manner in which the data was collected. To make use of LCTA data properly and to understand the structure of the LCTA data dictionary, a thorough understanding of the field methodology is required. It is beyond the scope of this document to describe the LCTA field data collection methodology completely; however, a brief description of the collection methodology precedes each data dictionary section. This condensed description provides the reader with sufficient understanding of the LCTA data for the purposes of this document; the level of description provided is sufficient only to understand and interpret the database structure. Detailed information describing standard field methodology is given in *U.S. Army Land Condition-Trend Analysis (LCTA) Plot Inventory Field Methods* (Tazik et al., February 1992). See this publication for detailed information about LCTA data collection techniques.

Document Syntax and Terminology

The following syntax conventions are used:

Entities (tables) names are in uppercase.

Data element names are uppercase.

The following terminology is used throughout this publication:

Entity : An entity, or table, stores data within a relational database management system. Data in an entity is represented by rows of data elements. Entities allow like data to be stored separately, for example, ground vegetation data is in GNDCOVER and land use data is in LANDUSE.

Data Element: Data elements make up the columns of an entity. Data elements have a name, data type, data length, nullity, and rules. INSTALID is the name of the column that stores the

installation identification code. It is a character field of length 3 and requires data.

Nullity: A column constraint that sets the data requirement rule for a data element. Data is required if a data element has a nullity rule of not null.

Referential Integrity: Tables with referential integrity constraints can be defined as parent and child tables. A parent table controls the entry of data into the child table. Specific data must be present in the parent table before it is allowed in the child table.

Join Relationship: Entities with join relationships have data elements in common, and common data can be joined by use of a SQL statement.

Primary Key: Used in referential integrity constraints. The controlling data element of the parent table.

Foreign Key: Used in referential integrity constraints. The data element of the child table controlled by the primary key of the parent table.

Plot Information

To ensure that the LCTA plots can be relocated, accurate site descriptions and maps must be prepared and photographs taken. Most of the descriptive information and maps are recorded during the initial inventory. The maps and site descriptions provide instructions so someone without prior knowledge of the site can relocate the beginning stake and resurvey the plot. The photographs also document the condition of the plot over time.

Initial inventory plot information is stored in the plot master table (PLOTMAST). Subsequent monitoring dates for each plot and other plot information is stored in the plot survey (PLOTSURV) table. These two tables will contain such information as the installation training area number, UTM coordinates, and USGS 7.5-minute quadrangle map name. Only information that should not change over time is stored in the PLOTMAST table; specific information for each measurement date is found in the PLOTSURV table.

To take full advantage of the current database system, a plot maps (PLOTMAP) table has been created. This table allows for the storage of plot location maps and photographs in digital form. For information on storing these images and the accepted formats, refer to the LCTA users interface program documentation and your vendor's database system manual.

<u>Table</u>	<u>Purpose</u>
PLOTMAST	master plot table [one per LCTA plot]
PLOTSURV	table identifying all inventories on each plot
PLOTMAP	map images for each plot

Land Use Data

The land use data documents recent land uses and maintenance activities, as well as evidence of wind and water erosion that can be observed within the boundaries of the 100 x 6-m plot. These data are used to relate land use and maintenance activities to changes in vegetation and soil erosion rates.

Conditions observed on areas adjacent to, but not within, the plot proper are not checked on the land use form. However, if noteworthy, these conditions may be recorded under the notes column of each table.

The tables storing land use data are LANDUSE, MAINTACT, and EROSEVID. LANDUSE_CODE, MAINT_CODE, and EROS_CODE are validation tables. Codes for each valid type of land use, maintenance activity, and observed erosion are defined in the appropriate validation table. Data is entered into the data tables as codes that are checked by the database against the validation tables. This allows for data integrity and simplified program interfacing. The valid land use, maintenance, and observed erosion categories are:

Military Land Uses

MB	BIVOUAC
MD	DEMOLITION
ME	EXCAVATION
MF	FOOT
MN	NO MILITARY USE
MO	OTHER MILITARY USE
MT	TRACKED
MW	WHEELED

Non-Military Land Uses

NF FORESTRY

LANDUSE	military and non-military land use data
MAINTACT	maintenance activity data
EROS_CODE	observed erosion code validation table
LANDUSE_CODE	land use code validation table
MAINT_CODE	maintenance activity code validation table

Vegetation Data

The line transect documents ground cover, canopy cover, and surface disturbance. Data are recorded using a modified point intercept method. Uses of these data include evaluating soil erosion status, military concealment cover, wildlife habitat, botanical composition, and for ground-truthing remotely sensed imagery.

One hundred points are sampled along the line transect beginning at the 0.5-m point and continuing at 1-m intervals along the measuring tape. The 1-m measuring rod is placed plumb to the ground at each point to determine ground cover, surface disturbance, and vertical distribution of vegetation up to 1 m. Canopy cover above 1 m is measured using the telescoping range pole.

Surface Disturbance

If a point has been disturbed, the nature of the disturbance is determined and the appropriate category selected. The categories of disturbance are stored in DISTURB_CODE. A point is considered disturbed if there is physical evidence of disruption of the soil surface or if the vegetation has been obviously crushed at that point. The fact that a site is in poor condition does not constitute evidence of disturbance. With vehicle tracks, the ability to distinguish a general direction of travel is a prerequisite to establishing evidence of disturbance.

Disturbance

N	NO DISTURBANCE
NR	NOT RECORDED
O	OTHER DISTURBANCE
P	PASS
R	ROAD
T	TRAIL
U	UNKNOWN

Disturbance data is entered into the GNDCOVER table under the column DISTURB. To ensure that only defined categories are used, the DISTURB_CODE table contains all valid disturbance categories. This table is a validation table for GNDCOVER, which is enforced through the use of primary and foreign keys.

GNDCOVER	ground data from line transect inventory
DISTURB_CODE	disturbance code validation table

Initial Inventory and Long-term Monitoring Ground Cover

The next data recorded for each point on the line is ground cover. Only material in contact with the ground at the tip of the measuring rod is recorded, i.e., the point at the center of the rod. This data is entered into the GNDCOVER table under the column VEGID. In many instances the data entered here will not be a plant code but one of the valid ground cover categories. However, to make this table compatible with other tables containing plant codes, the column has been named VEGID.

<u>Table</u>	<u>Purpose</u>
GNDCOVER	ground data from line transect inventory

Initial Inventory and Long-term Monitoring Canopy Cover

The vertical distribution and composition of canopy cover is recorded on the line by recording vegetation contacts within each decimeter interval on the 1-m measuring rod as it is held plumb to the ground. For vegetation above 1 m, the rod is replaced by a telescoping range pole.

Canopy cover is recorded in decimeter intervals to a height of 2 m. Above 2 m, it is recorded in 0.5-m intervals up to 8.5 m. Canopy cover contact is recorded only if vegetation appears as though it would be intercepted by the center of the rod or pole. Canopy cover above 8.5 m also is recorded as present if an imaginary extension of the range pole above 8.5 m would contact vegetation.

Only one intercept is recorded per interval. If two or more species or categories contact the rod in the same interval, only the one at the highest point within the interval is recorded. If more than one species is present over 8.5 m, only the topmost species is recorded.

Canopy cover data is stored in the AERCOVER table. Line transect location VEGLOC, height interval VEGHT and cover category VEGID are entered for each observation. Canopy cover above 8.5 m has a VEGHT of 8.6.

<u>Table</u>	<u>Purpose</u>
AERCOVER	aerial data from line transect inventory

Short-term Monitoring Line Transect Data

During a short-term monitoring season, data are gathered on the line transect using the point-intercept method as in the initial inventory, except in lesser detail. At 1-m intervals, beginning at the 0.5-m point, the tip of the 1-m measuring rod is used to determine the presence and type of disturbance. Ground cover is recorded using the valid codes listed here. Plant species identification is not necessary for short-term monitoring. The presence or absence of canopy cover at any height is determined for each point and recorded as shown in the valid aerial cover categories.

Short-term Monitoring Ground Cover Categories

B	BARE GROUND
L	LITTER
M	MICROPHYTE
NR	NOT RECORDED
P	PLANT
R	ROCK
U	UNKNOWN

Short-term Monitoring Canopy Cover Categories

A	ANNUAL
AP	ANNUAL/PERENNIAL
N	NO AERIAL COVER
NR	NOT RECORDED
P	PERENNIAL
U	UNKNOWN AERIAL COVER

Because the short-term monitoring data collection method is an abbreviated version of initial inventory, ground disturbance, ground cover, and canopy cover can be stored in the LINEMON table. Plant species identification is not necessary, so a defined set of categories exists for both ground cover and canopy cover. Ground disturbance uses the same categories defined for the initial inventory. To ensure that only defined categories are used for these data the DISTURB_CODE, GNDCOV_CODE, and AERCOV_CODE tables contain all valid disturbance, ground cover, and canopy cover

categories, respectively. These tables are validation tables for LINEMON and are enforced through the use of primary and foreign keys.

<u>Table</u>	<u>Purpose</u>
LINEMON	line transect monitoring data
AERCOV_CODE	monitoring aerial cover code validation table
DISTURB_CODE	disturbance code validation table
GNDCOV_CODE	monitoring ground cover code validation table

Initial Inventory and Long-term Monitoring Belt Transect Data

The belt transect is intended to characterize species composition, density, and height distribution of woody and succulent vegetation. The belt transect extends the length of the 100-m line transect. Although the belt has a standard width of 6 m (3 m to either side of the line transect), the width may be reduced for high density species. Any adjustments in the belt transect width are noted in the BELTSURV table. In addition, the default belt width and the minimum height used for each plot is recorded.

The locations of all woody plants above a predetermined minimum height are mapped, and the coordinates, species, and height are entered into the BELTTRAN table.

All rooted shrubs and trees are recorded regardless of whether they are live or dead. All cacti, regardless of height, are recorded. Individual plants with heights greater than 8.5 m are in general entered as 8.6 m.

Some woody plants tend to produce multiple stems from a common root system. Although they may appear to be separate plants, these multistemmed plants are recorded as a single individual. For plants that form dense stands by means of root sprouts, adventitious roots, or rhizomes, the entire clump (motte) is regarded as one individual. The beginning and ending line location of the clump are recorded in the BELTTRAN table as CLUMPBEGIN and CLUMPEND. The area of the clump is recorded as CLUMPAEA. The height of the clump is determined by measuring the tallest stem within the clump.

<u>Table</u>	<u>Purpose</u>
BELTSURV	parameters for inventory and monitoring belt transects
BELTTRAN	belt transect inventory data

Short-term Monitoring Belt Transect Data

Rather than recording the location and height of each woody plant as in the initial inventory, short-term monitoring of the belt transect entails only a tally of each species by 1-m height classes up to 4 m, and a single class for plants higher than 4 m. This data is stored in the BELTMON table.

BELTSURV	parameters for inventory and monitoring belt transects
BELTMON	belt transect monitoring data

Plant Species Information

All vegetation data stored in the database are checked against the master plant species table (PLANTS) in the SPECIES database for valid information. For each valid unique species found in the database corresponding information is placed in the PLNTLIST table by the LCTA user's interface.

<u>Table</u>	<u>Purpose</u>
PLNTLIST	master list cataloging each plant code

Floristic Inventory

A primary goal of the LCTA program is to assemble a complete collection of all vascular plants that occur on an installation and to produce a comprehensive, annotated list of all taxa present, including threatened and endangered species. Three specimens of each taxon are collected. One specimen is accessioned to a public herbarium to serve as a voucher. The remaining two specimens are laminated in plastic with a label and included in a reference collection to be housed at the installation. The laminated specimens can be taken into the field to aid in species identification by LCTA crew and natural resources personnel. Though the majority of taxa are collected in 1 to 3 years by a plant taxonomist contracted specifically for this task, species not yet included in the collection may be added any time by the field crew leader.

Nomenclature and classification conform to the *National List of Scientific Plant Names* (USDA 1982).

Floristic inventory data is stored in the HERBRIUM table. In addition to the many elements in this table, the Federal and state threatened, endangered, and sensitive category (FEDSTAT, STATESTAT) is recorded where appropriate. The FED_STATUS

and STATE STATUS tables contain the valid codes for these fields and are enforced through referential integrity constraints.

<u>Table</u>	<u>Purpose</u>
HERBRIUM	floristic inventory data
FED STATUS	Federal status validation table
STATE STATUS	state T&E status validation table

Wildlife Inventory

A variety of wildlife data may be collected on or near LCTA plots. Only song bird and small mammal data are required as a standard. These taxa are useful as bioindicators and are easy to sample at the scale of the LCTA plot.

Standard wildlife inventories are conducted on a subsample of approximately one-third of the core plots, up to a total of about 60. Core wildlife plots are selected in a stratified random fashion from among all the established core plots to represent the major soil and land cover types in proportion to their occurrence on the installation. This constitutes the minimum sampling required. More core plots are added as necessary to represent all soil and land cover types with at least one wildlife plot.

Birds (Standard)

Birds are censused at each plot using a modified point-count transect technique. Each plot is censused once in the morning and once in the evening (denoted by a.m. or p.m.) by slowly walking the length of the LCTA plot in 6 minutes, recording all birds seen or heard within 100 m of the plot (Line Out). On reaching the end of the plot, the observer stops for 8 minutes and again records all birds seen or heard within 100 m (End Point). The observer then walks back to the starting point in 6 minutes, again recording any birds detected within 100 m of the plot (Line In). All morning censuses are conducted between 0.5 hour before and 4 hours after sunrise on relatively calm, rainless days. The evening census is conducted during the 4 hours prior to sunset. The time of the survey is entered in the BIRDS table under the PERIOD column. The locations of the line from which the observations were taken are entered in the MEASURE PT column as a code. Valid locations are stored in the POINT CODE table, which is a validation table for BIRDS and is enforced through the use of primary and foreign keys. All plot and survey information is entered in the BIRDSURV table.

All birds detected are recorded using standard common names and species codes. Numbers of each species are recorded for each segment of the survey using the codes for mated status. The MATED_STATUS column uses valid codes from the MATED_STATUS_CODE table. This information is used to infer the number of pairs present on the plot. A singing male, male/female pair, or adult accompanied by young indicates one pair present. Presence of additional pairs can be inferred only if additional singing males, male/female pairs, or same sex adults accompanied by young are observed. An individual nonsinging male, lone female, or individual of unknown sex or age indicates presence of the species but may not indicate a second pair. Flyovers of birds not using the plot and other birds observed outside the plot limits are recorded the same as those observed, plus a "Y" is entered in the FLYOVER column. All flyover data should be entered as a new observation with a "Y" in the FLYOVER column.

The field methods suggest that max pair data be recorded as the maximum number of pairs observed among the three segments of the survey. Max pairs information is not entered into the database because it can be derived from the available data in the table. This would be redundant data.

Bird Mated Status Codes

*	Singing male
PR	Adult male/female pair
M	Nonsinging male
F	Female only
U	Unknown sex and age
Y	Young of the year
FL	Flock
C	Combined (all statuses were totaled and entered as one observation)
NR	Not recorded

Measurement Point Codes

LO	Line Out
LI	Line In
EP	End Point

MATED_STATUS_CODE	bird mated status validation table
POINT_CODE	bird data collection line location validation table

Small Mammals (Standard)

Small mammals are surveyed by setting two rows of 20 museum special traps and five rat traps parallel to the long axis of each LCTA plot. Trap stations are spaced approximately 7.5 m apart; trap lines are spaced 30 m apart. Snap traps are baited with a mixture of rolled oats and peanut butter and run for two nights for a total of 100 trap nights per plot. Traps are set during the late afternoon or evening of the first day, checked early the next morning, reset during the late afternoon or evening of the second day, and checked and collected on the following morning.

The MAMMALS table stores data for the standard 100 trap nights using the date of the first night in the RECDATE column. For each method of observations, listed here, the species (VERTID), sex (SEX), method (METHOD), and number (NUM) are recorded. If any retraps are known, this number is entered in the RETRAP column. NUM represents the total number of species, including the number of retraps. The METHODS_CODE and GENDER_CODE tables are validation tables for the METHOD and SEX columns of the MAMMALS table. Referential integrity for these tables is enforced using primary and foreign keys. All plot and survey information is stored in the MAMSURV table.

Gender Codes

M	Male
F	Female
U	Unknown
C	Combined (all genders were totaled and entered as one observation)
NR	Not recorded

Method Codes

U	Unknown
NR	Not recorded

<u>Table</u>	<u>Purpose</u>
MAMMALS	mammal data from wildlife inventory
MAMSURV	table identifying all mammal inventories
METHODS_CODE	mammal and herpetologic methods validation table
GENDER_CODE	gender code validation table

Reptiles and Amphibians (Optional)

Reptiles and amphibians are censused using a pitfall trapping array with optional box traps in association with the LCTA transects. The central bucket of each pitfall array is located approximately 75 m from the origin of the LCTA line transect, and at a random azimuth within a 180 degree arc opposite the azimuth of the transect. The array must be in the same soil type and landcover category as the LCTA transect. The 100 m point may be used as the point of origin if necessary to keep the array within the correct soil type and landcover category. The four 5-gallon plastic buckets are buried so the lip is flush with the soil surface. A cover is placed above the bucket, supported by rocks or wood blocks, to provide shade to any trapped animals. Aluminum drift fences 8 to 12 in. high, buried 2 to 3 in. in the ground and held in place by wooden or metal stakes, are used to funnel animals into the buckets. The fence should be painted to blend with surroundings to make it less conspicuous and less prone to disturbance. The fence must overlap the lip of the bucket by about 1 in. to force the animals into the bucket and prevent them from moving around the end of the aluminum.

The HERPS table stores data for the standard 100 trap nights using the date of the first night in the RECDATE column. For each method of observations, listed here, the species (VERTID), sex (SEX), method (METHOD), and number (NUM) are recorded. If any retraps are known, this number is entered in the RETRAP column. NUM represents the total number of species, including the number of retraps. The METHODS_CODE and GENDER_CODE tables are validation tables for the METHOD and SEX columns of the HERPS table. Referential integrity for these tables is enforced using primary and foreign keys. All plot and survey information is stored in the HERPSURV table.

<u>Table</u>	<u>Purpose</u>
HERPS	herpetologic data from wildlife inventory
HERPSURV	table identifying all inventories for amphibians and reptiles on each plot
METHODS_CODE	mammal and herpetologic methods validation table
GENDER_CODE	gender code validation table

Species List

All wildlife data stored in the database are checked against the main wildlife species table (VERTS) in the SPECIES database for valid information. For each valid unique species found in the database, corresponding information is placed in the VERTLIST table by the LCTA user's interface. This information includes order, class, family, species, genus, subspecies, variety, and common name. Refer to the LCTA user's interface manual for details on running this procedure.

<u>Table</u>	<u>Purpose</u>
VERTLIST	master list cataloging each vertebrate code

Climate Data

Climate data is collected from Scott Air Force Base for weather stations on and near LCTA installations. This data is collected as daily values for rain, temperature, and pan evaporation. Information about the weather station is stored in the CLIMATESTATIONS table. To ensure that the weather station information data is known, CLIMATESTATIONS table is a parent table to CLIMATEDATA.

<u>Table</u>	<u>Purpose</u>
CLIMATEDATA	climate data
CLIMATESTATIONS	climate station information

Soil and Topographic Information

Soil Depth Estimation. Soil depth can have a significant effect on plant productivity and botanical composition. Shallow soils are generally less productive, more susceptible to damage, and more difficult to reclaim than deeper soils. An estimate of soil depth is made for each LCTA plot by noting how deep it was possible to drive each of the steel rods into the soil. The average depth is recorded.

Soil Samples. A composite soil sample is taken at each plot. Five small samples are taken approximately 1 m from the line transect at the 0, 25, 50, 75, and 100-m points. All litter is removed from the surface. With a narrow spade or mattock, a small pit approximately 15 cm deep is dug. A vertical slice comprising approximately 0.2 L of soil is taken from the side of each pit, and roots and plant crowns are removed. The samples are combined in a sealable plastic bag, and a double-faced aluminum tag is inscribed with the installation name or abbreviation and plot number. Sealed bags are boxed and shipped to the USDA National Soil Survey Laboratory in Lincoln, NE, for analysis of selected physical and chemical soil characteristics that affect site

erodibility, productivity, and botanical composition. This information is stored in the SOILSMPL table.

Aspect

Aspect, which can influence soil moisture, botanical composition, and vegetation cover, is determined for plots while standing at the 50 m point and estimating the general direction that water would flow across the site. Using a compass, aspect is estimated to the nearest octant. If the average slope is less than 5 percent, aspect is considered unimportant and level is circled on the form. Aspect is placed in the PLOTSURV table under the ASPECT column.

Slope Length and Gradient

Slope length and gradient are measured at the 0, 50, and 100-m points. Slope length is the straight line distance runoff travels across each sample point. It is measured from the point of origin of runoff to a point where a barrier or significant reduction in slope causes overland flow to be diverted into a defined channel or causes suspended sediment to be deposited. Slope length is estimated by pacing the distance between point of origin and point of deposition. Slope gradient is measured with a clinometer to the nearest half percent. Slope length (SLPLEN) and gradient (SLOPE) are stored in the SOILLS table for each location (LOC).

<u>Table</u>	<u>Purpose</u>
PLOTSURV	table identifying all inventories on each plot
SOILLS	plot slope data (used to calculate LS in USLE)
SOILMAST	master soil series table
SOILSMPL	soil sample data from USDA National Soils Survey Laboratory

Supplementary Information

The following tables represent information that does not fall under any of the foregoing categories. The BASALA, ENVCONST, and F_COUNT tables were created to store data that is not part of the standard LCTA data collection. The database has been augmented with the addition of these tables to meet the needs of some installations. The GROUPING table has been added to facilitate grouping data for the purpose of analysis either through the use of the LCTA program or SQL statements. The HISTORY table is meant to hold general information about the installation, data collected, or the database. The INSTMAST table is a master listing for all LCTA installations and acts as a parent table to many of the other data tables.

BASALA	Basal area data
ENVCONST	Environmental constraints
F_COUNT	Optional data from inventory or monitoring
GROUPING	Dynamic table for LCTA front end routines
HISTORY	General informational data
INSTMAST	Master table listing LCTA installations

Summary Data

In database theory, any stored data that is calculated from other data within the database is called derived data. Storing derived data usually is discouraged because it can be obtained from existing data in the database, and storing it adds to the size of the database. Derived data is essentially duplicate data.

Because the LCTA databases hold a great deal of data and many of the analyses take some time to run, summary (derived) data is stored in the database. Also, this summary information can be used to group other data in the database for additional information.

<u>Tables</u>	<u>Purpose</u>
COMMCLASSPLOTSUM	plant community classifications for each plot
EROSION	table for USLE estimations
LANDUSEYEARSUM	land use summary data by year
PCSDPLOTSUM	plant cover, surface disturbance summary data by plot
PCSDYEARSUM	plant cover, surface disturbance summary data by year
PCTTYEARSUM	percent of tolerance (USLE) summary data by year
TACTCONA	tactical concealment summary A
TACTCONB	tactical concealment summary B
TACTCONC	tactical concealment summary C

Validation Tables

Validation tables are used to enforce referential integrity constraints. After these integrity constraints are defined in the database system, by the database administrator, data will be allowed in the child table only if it exists in the parent table. The primary key of the parent table restricts the foreign key of the child table.

<u>Table</u>	<u>Purpose</u>
AERCOV_CODE	monitoring aerial cover code validation table
DISTURB_CODE	disturbance code validation table
EROS_CODE	observed erosion code validation table
EROSEVID	erosion evidence data from land use data
FED_STATUS	Federal status validation table
GENDER_CODE	gender code validation table
GNDCOV_CODE	monitoring ground cover code validation table
LANDUSE	military and nonmilitary land use data
LANDUSE_CODE	land use code validation table
MAINT_CODE	maintenance activity code validation table
MAINTACT	maintenance activity data
MATED_STATUS_CODE	bird mated status validation table
METHODS_CODE	mammal and herpetologic methods validation table
POINT_CODE	bird data collection line location validation table
STATE_STATUS	state T&E status validation table

Relational Constraints

Relational constraints, in this situation referential integrity constraints, will be discussed in this section. The previous section listed the validation tables used to ensure data integrity of the data tables. The actual columns used to link the tables will be presented in this section.

Referential integrity constraints are used to ensure data integrity in a database. These constraints are defined between a parent table and a child table by the use of primary and foreign keys. A parent is defined with a data element or set of elements as a primary key. The primary key is a unique value, or set of values, that constrain the entry of data into the dependent child table. For example, PLOTMAST is a parent table to PLOTSURV with PLOTID as the primary key in PLOTMAST and the foreign key in PLOTSURV. If a particular value for PLOTID does not exist in PLOTMAST, data for that plot cannot be added to the PLOTSURV table.

Other rules exist that can be used to ensure data integrity. These rules include column constraints, check constraints, unique and primary key, and others. The most important column constraint is the NOT NULL rule. This rule forces a value to be entered for a data element (column) before that observation (row) of data is applied to the database. The NOT NULL is specified in the database schema and applied by the database administrator by using SQL statements. This rule is used throughout the LCTA database. Consult the data element listing appendix for elements with the

NOT NULL rule. Check constraints test the rows of a table against a logical expression. Not all database servers utilize this rule, and it currently is not used by the LCTA database. The UNIQUE and PRIMARY KEY rules are important to relational database theory and are somewhat related. The UNIQUE rule ensures that no duplicate values will exist for a column. Unless specifically defined, a column with the UNIQUE rule applied can have only one NULL here. The PRIMARY RULE is used in referential integrity constraints as discussed. Only one primary key can exist for a table, but many columns can make up the primary key. Each column that makes up the primary key must have the UNIQUE and NOT NULL rules applied. The LCTA database uses the primary key and the related foreign key rules extensively; refer to the database schema diagram (Appendix A) for their locations.

Defining referential integrity constraints is done by the database administrator using Data Definition Language (DDL) or SQL statements. Parent tables, child tables, and their linking keys are listed. The DDL or SQL statements are in Appendix D.

* Denotes that there is no contributing table. This element has been defined as a primary key to be passed to other tables as a foreign key. In other words, the table becomes the initial contributing table for that primary key.

Legacy Components

Legacy components refer to data elements, entities, or relations that do not conform to the new proposed database standards. These components persist either because of operational considerations or the likelihood of the loss of data. The components that can be categorized as legacy components follow.

When possible, relational theory and rules have been used in this design of the LCTA database to ensure data integrity; the most important of these is referential integrity constraints. A few exceptions exist, primarily because of operational considerations. These exceptions include the SOILMAST, PLNTLIST, and VERTLIST tables.

The SOILMAST table stores information for each unique soil series found on LCTA plots. The SOILSER element contains the code used to refer to a soil series; it is found in both the PLOTMAST and SOILMAST tables. By using a relational join, SQL query, soil series information for each plot can be obtained from the PLOTMAST and SOILMAST tables. To ensure that only valid soil series codes are entered for each plot in the PLOTMAST table, a referential constraint between SOILMAST (parent table) and PLOTMAST (child table) could be defined. However, the issue is complicated because other plot information found in the PLOTMAST table is collected in the field and added to the database before the soil series is identified. In practice the data usually is added to the database, and the user will identify the soil series for each plot and update the database at a later time. This restricts the use of referential integrity constraints for the SOILMAST table.

The PLNTLIST and VERTLIST tables contain unique plant and wildlife information found on LCTA plots. The LCTA program is used to scan all plant and wildlife data tables and insert the species information for those valid data into the appropriate table. The PLNTLIST and VERTLIST tables are populated after the data tables. In some situations a species cannot be identified in the field and must be given a temporary code. The temporary code is changed to a known code when the species is identified. These operational considerations eliminate the possibility of defining the PLNTLIST and VERTLIST tables as parent tables to the data tables.

3 Database Schema Updates

This section will cover changes to the database schema as released with version 1.0 of the user's interface. These changes have been made to enhance the database usability, ensure further data integrity, and increase metadata.

New Tables

The format for this section is:

TABLE NAME

Description of the data stored in the table

Reason for adding table to the database

AERCOV_CODE

Short-term monitoring aerial cover code validation table

Validation table for LINEMON, element AERCOV

BIRDSURV

Table identifying all inventories for bird data

Plot survey information for bird data

CLIMATEDATA

Climate data

Climate data for analysis purposes

CLIMATESTATIONS

Climate station information

Validation table for CLIMATEDATA, element STATION

DISTURB_CODE

Disturbance code validation table

Validation table for GNDCOVER and LINEMON, element DISTURB

ENVCONST*Environmental constraints*

Data from installation environmental constraint surveys

EROS_CODE*Observed erosion evidence code validation table*

Validation table for EROSEVID, element STATUS

FED_STATUS*Federal status validation table*

Validation table for HERBRIUM, element FEDSTAT

GENDER_CODE*Wildlife gender code validation table*

Validation table for HERPS and MAMMALS, element SEX

GNDCOV_CODE*Short-term monitoring ground cover code validation table*

Validation table for LINEMON, element GNDCOV

GROUPING*Dynamic table for LCTA front end routines (user defined attributes)*

Used by the update front table to group summaries

HERPSURV*Table identifying all inventories for amphibians and reptiles on each plot*

Plot survey data for herpetologic data

LANDUSE_CODE*Land use code validation table*

Validation table for LANDUSE, element LANDUSE

MAINT_CODE*Maintenance activity code validation table*

Validation table for MAINTACT, element MAINTAIN

MAMSURV*Table identifying all inventories for mammals on each plot*

Plot survey data for mammals data

MAPS

Installation geographic information system maps used to display LCTA data

Allows storing of geographic information system maps in the database

MATED_STATUS_CODE

Bird mated status validation table

Validation table for BIRDS, element MATED_STATUS

METHODS_CODE

Mammal and herpetologic trapping methods validation table

Validation table for HERPS and MAMMALS, element METHOD

PLOTMAPS

Map and photo images for each plot

Allows storing of plot location maps

POINT_CODE

Bird data collection line location validation table

Validation table for BIRDS, element MEASURE_PT

STATE_STATUS

State Threatened and Endangered (T&E) status validation table

Validation table for HERBRIUM, element STATESTAT

Modified Tables

The format for this section is:

TABLE NAME

Description of the data stored in the table

Reason for changing the table

BIRDS

Bird data from wildlife inventory

Changed to reflect data as it is collected

HERBRIUM

Floristic Inventory data

Changed to reflect data as it is recorded

HERPS

Herpetologic data from wildlife inventory

Changed to reflect data as it is collected

MAMMALS

Mammal data from wildlife inventory

Changed to reflect data as it is collected

Discontinued Tables

The tables in this section were dropped because they no longer are used or the new functionality of the user's interface does not require them.

4 Database Migration Strategy

The following is a series of SQL statements that will convert an existing LCTA database to the database schema described in this document. These commands are presented in SQLBase format and must be executed in the order presented to ensure proper operation. These statements try to account for all possible errors that may be encountered. However, some difficulty may be encountered during this migration strategy.

Appendix A: Database Schema

The LCTA database schema is presented in IDEF1X format. Terms and notation are presented here.

Identifying relation	A relationship in which the primary key attributes of the parent table become part of the primary key of the child entity. Represented by a solid line between entities with a solid circle at the child entity end.
Nonidentifying relation	A relationship in which the primary key attributes of the parent do not become part of the primary key of the child. Represented by a dashed line between entities with a filled solid at the child entity end.
Independent entity	An entity that does not depend on any other for its identification. Represented by a squared corner rectangle.
Dependent entity	An entity that depends on another for its identity (the primary key of the child contains attributes inherited from the primary key of the parent). Represented by a rounded corner rectangle.
PK (primary key)	An element or group of elements that act as the unique identifier of the entity. Represented by placing [PK] to the left of the element.
FK (foreign key)	A primary key of a parent entity that is contributed to the child entity through a relationship. Represented by placing [FK] to the left of the element.

Appendix B: Entity (table) Information

Entity definitions and structures are presented in this appendix. Syntax is as follows.

TABLE NAME

Description of the data stored in the table

data structure

The data structure is presented in the format output by Systems Architect.* Each data element is followed by a "+" denoting the end of the element information. In some cases information between two "/" will appear. This shows the referential integrity constraint references. For example, INSTALID/FKFROM "PLOTSURV. INSTALID()"/+ is defined as:

the data element INSTALID is a foreign key constrained by the element INSTALID in the table PLOTSURV.

* Popkin Software and Systems Incorporated, 11 Park Place, New York, NY.

Appendix C: Data Element Information

Data element definitions are presented in this appendix. Syntax is as follows.

DATA ELEMENT NAME

element definition

SQL Data Type: designates the type of data

SQL Type Qualifiers: length of text data

Default Nullity: if not null data is required

Derived Data: if T (true) this data was calculated from other data in the database

Valid Entries: gives valid data information

Missing/Invalid: if applicable lists the data entered to denote missing or invalid data

Used By: a list of tables that contain the data element

LCTA Data Element/Entity Reference

LCTA System

ABUNDANCE

Relative abundance, 1-5

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *HERBRJUM*

AC00

Percent of plots with no aerial concealment

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

AC100

Percent of plots with 100% aerial concealment

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

AC20

Percent of plots with 20% aerial concealment

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

LCTA Data Element/Entity Reference
LCTA System

AC40

Percent of plots with 40% aerial concealment

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

AC4M

Number of points with cover above 4 m

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

AC60

Percent of plots with 60% aerial concealment

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

AC80

Percent of plots with 80% aerial concealment

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

LCTA Data Element/Entity Reference
LCTA System

ACCBURN

Number of plots with accidental burn

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

ACMEAN

Mean aerial concealment percent

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

ACOBS

Number of aerial concealment plots

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

ACSTDEV

Standard deviation of mean aerial concealment percent

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

LCTA Data Element/Entity Reference

LCTA System

AERCOV

Short-term monitoring aerial cover code

SQL Data Type: CHAR

SQL Type Qualifiers: 2

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: (A)nnual,(P)erennial,(AP)annaul&perennial,(N)one

Missing/Invalid: N/A

Used By: AERCOV_CODE

Used By: LINEMON

AERCOV_DEF

Short-term monitoring aerial cover code definition

SQL Data Type: CHAR

SQL Type Qualifiers: 35

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: Annual,Perennial,annaul&perennial,None

Missing/Invalid: N/A

Used By: AERCOV_CODE

AERCOV_NOTE

Aerial cover category note

SQL Data Type: VARCHAR

SQL Type Qualifiers: 100

Default Nullity: NULL

Derived Data: F

Valid Entries: Text

Missing/Invalid: N/A

Used By: AERCOV_CODE

ANALYEAR

Year for recording:analysis

SQL Data Type: INTEGER

SQL Type Qualifiers:

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: 4 digit year

Missing/Invalid: N/A

Used By: COMMCLASSPLOTSUM

Used By: EROSION

LCTA Data Element/Entity Reference

LCTA System

Used By: *LANDUSEYEARSUM*
Used By: *PCSDPLOTSUM*
Used By: *PCSDYEARSUM*
Used By: *PCTTYEARSUM*
Used By: *TACTCONA*

AREA

Surface area of a vegetation clump

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *BELTTRAN*

ASPECT

Plot aspect

SQL Data Type: *CHAR*

SQL Type Qualifiers: *2*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *N,NE,E,SE,S,SW,W,NW,L*

Missing/Invalid: *N/A*

Used By: *PLOTSURV*

ASSOSPP

Associated species

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *150*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid associated species*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

ATDB

Aerial top hits dwarfshrub broadleaf

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

ATDC

Aerial top hits dwarfshrub conifer

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

ATFA

Aerial top hits forb annual

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

ATFP

Aerial top hits forb perennial

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

ATGA

Aerial top hits grass annual

SQL Data Type: *INTEGER*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

ATTB

Aerial top hits tree broadleaf

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

ATTC

Aerial top hits tree conifer

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

AVEMINHT

Average minimum drip height

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

AZIMUTH

Plot azimuth

SQL Data Type: *REAL*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *HERPSURV*

Used By: *PLOTMAST*

BA

Basal Area

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *BASALA*

BAITS

Baits used for small mammal trapping

SQL Data Type: *CHAR*

SQL Type Qualifiers: *25*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid baits used for trapping*

Missing/Invalid: *N/A*

Used By: *MAMSURV*

BARCLAY

Ration 15 Bar-Clay

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

BARWATER

15 Bar water on air-dry soil, weight percent

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

BAUTHOR

Author of the species

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *150*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

BELTHT

Belt transect belt minimum height

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *BELTSURV*

BELTWIDE

Belt transect belt width

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *BELTSURV*

BIRDNOTE

Plot note for bird survey

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference
LCTA System

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *BIRDSURV*

BIV

Number of Bivouac disturbed sites

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

C

Cover value (C) used in USLE

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

C1

C1 subfactor of C (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

C2

C2 subfactor of C (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

CALCKMEAN

Mean Calculated natural erodibility (K) value (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILMAST*

CALCKSTDEV

Standard deviation of calculated natural erodibility (K) value (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *SOILMAST*

CARBLT2MM

Carbonate, < 2mm fraction

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

CASENO

Case Number

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *ENVCONST*

CAT1TO2

Short-term belt height category 1 to 2 meters

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BELTMON*

CAT2TO3

Short-term belt height category 2 to 3 meters

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BELTMON*

CAT3TO4

Short-term belt height category 3 to 4 meters

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BELTMON*

CATGT4

Short-term belt height category greater than 4 meters

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BELTMON*

CATMINTO1

Short-term belt height category minimum to 1 meter

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BELTMON*

CCANN

Number of locations with only annual cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

CCANNMEAN

Mean number of locations with only annual cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

CCANNPER

Number of locations with annual and perennial cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

CCANNSTDEV

Standard deviation of number of locations with only annual cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

CCAPMEAN

Mean number of locations with annual and perennial cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

CCAPSTDEV

Standard deviation of number of locations with annual and perennial cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

CCNONE

Number of locations with no cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

CCNONEMEAN

Mean number of locations with no cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

CCNONESTDEV

Standard deviation of number of locations with no cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

CCOBS

Number of total locations measured

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

CCPER

Number of locations with only perennial cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

CCPERMEAN

Mean number of locations with only perennial cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

CCPERSTDEV

Standard deviation of number of locations with only perennial cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

CHEMICAL

Number of plots with evidence of chemical use

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

CLASS

Vertebrate species class

SQL Data Type: *CHAR*

SQL Type Qualifiers: *15*

Default Nullity: *NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Species database Class*

Missing/Invalid: *N/A*

Used By: *VERTLIST*

CLMPBEGIN

Beginning location of vegetation clump

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number (0.0-100.0)*

Missing/Invalid: *N/A*

Used By: *BELTTRAN*

CLMPEND

End location of vegetation clump

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number (0.0-100.0)*

Missing/Invalid: *N/A*

Used By: *BELTTRAN*

CLOUD_COVER

Percent of cloud cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid percentage (0-100)*

Missing/Invalid: *N/A*

Used By: *BIRDSURV*

Used By: *HERPSURV*

Used By: *MAMSURV*

CO3CLAY

CO3 Clay

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

COLLDATE

Herbarium collection date

SQL Data Type: *DATE*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid date*

Missing/Invalid: *N/A*

Used By: *HERBRUM*

COLLECTOR

Collector(s)

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *70*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *BIRDSURV*

Used By: *HERBRUM*

Used By: *HERPSURV*

Used By: *MAMSURV*

COLLNO

Collection number

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *HERBRUM*

COMMENTS

Comments on plant characteristics, site, habitat, etc.

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *175*

LCTA Data Element/Entity Reference

LCTA System

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

COMMON

Species common name

SQL Data Type: *CHAR*

SQL Type Qualifiers: *40*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database animal common name*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

Used By: *VERTLIST*

COUNTY

County where collected

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *30*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid State county*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

COURFRAG

Course fragments (> 2mm), weight % of whole soil

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

CROP

Number of plots with crop use

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

LCTA Data Element/Entity Reference

LCTA System

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

CSAND

Soil analysis of course sand

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

CSILT

Soil analysis of course silt

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

DEBDAM

Number of plots with debris dams

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

DECLIN

Plot declination

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

LCTA Data Element/Entity Reference

LCTA System

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PLOTMAST*

DEMO

Number of plots with demolition

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

DETERMIN

Determiner of final identification

SQL Data Type: *CHAR*

SQL Type Qualifiers: *20*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRRIUM*

DISTURB

Ground disturbance code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *2*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *(N)one, (P)ass, (T)rail, (R)oad, (O)ther*

Missing/Invalid: *N/A*

Used By: *DISTURB_CODE*

Used By: *GNDCOVER*

Used By: *LINEMON*

DISTURB_DEF

Ground disturbance code definition

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *None,Pass,Trail,Road,Other*

Missing/Invalid: *N/A*

Used By: *DISTURB_CODE*

DISTURB_NOTE

Disturbance category note

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *DISTURB_CODE*

DMCE

Universal Trasverse Mercator coordinate, easting

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid UTM - Easting*

Missing/Invalid: *N/A*

Used By: *CLIMATESTATIONS*

Used By: *HERBRIUM*

Used By: *PLOTMAST*

DMCELL

Universal Trasverse Mercator easting of lower left corner

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid DMC (UTM)*

Missing/Invalid: *N/A*

Used By: *MAPS*

DMCETR

Universal Trasverse Mercator easting of top right corner

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid DMCE (UTM)*

Missing/Invalid: *N/A*

Used By: *MAPS*

DMCN

Universal Trasverse Mercator coordinate, northing

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid UTM - Northing*

Missing/Invalid: *N/A*

Used By: *CLIMATESTATIONS*

Used By: *HERBRIUM*

Used By: *PLOTMAST*

DMCNLL

Universal Trasverse Mercator northing of lower left corner

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid DMCN (UTM)*

Missing/Invalid: *N/A*

Used By: *MAPS*

DMCNTR

Universal Trasverse Mercator northing or top right corner

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid DMCN (UTM)*

Missing/Invalid: *N/A*

Used By: *MAPS*

DRIFTING

Number of plots with observed drifting wind erosion

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

EFFCOVER

Effective cover in USLE calculation

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

ELEV

Elevation

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

EXCA

Number of plots with excavation

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

EXCPTNSP

Exception species to belt width

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *CHAR*

SQL Type Qualifiers: 8

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Species database plant code*

Missing/Invalid: *N/A*

Used By: *BELTSURV*

FAMILY

Species family

SQL Data Type: *CHAR*

SQL Type Qualifiers: 20

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database Family*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

Used By: *PLNTLIST*

Used By: *VERTLIST*

FEDSTAT

Federal status code

SQL Data Type: *CHAR*

SQL Type Qualifiers: 6

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid Federal T&E code*

Missing/Invalid: *N/A*

Used By: *FED_STATUS*

Used By: *HERBRIUM*

FEDSTAT_DEF

Federal status code definition

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: 50

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid Federal T&E definition*

Missing/Invalid: *N/A*

Used By: *FED_STATUS*

FEDSTAT_NOTE

LCTA Data Element/Entity Reference

LCTA System

Federal status code notes

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *FED_STATUS*

FLYOVERS

Bird species flyover data

SQL Data Type: *char*

SQL Type Qualifiers: *3*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *(Y)es, (N)o*

Missing/Invalid: *N/A*

Used By: *BIRDS*

FOOT

Number of plots with foot traffic

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

FOREST

Number of plots with forestry activity

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

FORM1

LCTA Data Element/Entity Reference

LCTA System

Plant life form 1

SQL Data Type: CHAR

SQL Type Qualifiers: 1

Default Nullity: NULL

Derived Data: F

Valid Entries: (G)rass,(F)orb,(T)ree,(H)half,(S)shrub,(T)ree,(W)woody

Missing/Invalid: N/A

Used By: PLNTLIST

FORM2

Plant life form 2

SQL Data Type: CHAR

SQL Type Qualifiers: 1

Default Nullity: NULL

Derived Data: F

Valid Entries: (V)ine,(S)hrub

Missing/Invalid: N/A

Used By: PLNTLIST

FSAND

Soil Analysis of find sand

SQL Data Type: FLOAT

SQL Type Qualifiers:

Default Nullity: NULL

Derived Data: F

Valid Entries: Real number

Missing/Invalid: N/A

Used By: SOILSMPL

FSILT

Soil Analysis of find silt

SQL Data Type: FLOAT

SQL Type Qualifiers:

Default Nullity: NULL

Derived Data: F

Valid Entries: Real number

Missing/Invalid: N/A

Used By: SOILSMPL

GCBARE

LCTA Data Element/Entity Reference

LCTA System

Number of bare ground points

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GCBAREMEAN

Mean number of bare ground points

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GCBARESTDEV

Standard deviation of number of bare ground points

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GCLITMEAN

Mean number of points with litter

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GCLITSTDEV

LCTA Data Element/Entity Reference

LCTA System

Standard Deviation of points with litter

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GCLITTER

Standard deviation of number of points with litter

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GCMICRO

Number of points with microphytes

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GCMICROMEAN

Mean number of points with microphytes

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GCMICROSTDEV

LCTA Data Element/Entity Reference

LCTA System

Standard deviation of number of points with microphytes

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GCOBS

Total number of ground cover points

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GCPLANT

Number of points with plants

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GCPLANTMEAN

Mean number of points with plants

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GCPLANTSTDEV

LCTA Data Element/Entity Reference

LCTA System

Standard deviation of number of points with plants

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GCROCK

Number of points with rocks

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GCROCKMEAN

Mean number of points with rocks

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GCROCKSTDEV

Standard deviation of number of points with rocks

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GDNONE

LCTA Data Element/Entity Reference

LCTA System

Number of points with no ground cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GDNONEMEAN

Mean number of points with no ground cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GDNONESTDEV

Standard deviation of number of points with no ground cover

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GDOBS

Number of ground disturbance points

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GDOTHER

LCTA Data Element/Entity Reference

LCTA System

Number of points with other disturbance

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GDOTHMEAN

Mean number of points with other disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GDOTHSTDEV

Standard deviation of number of points with other disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GDPASS

Number of points with vehicle pass disturbance

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GDPASSMEAN

LCTA Data Element/Entity Reference

LCTA System

Mean number of points with vehicle pass disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GDPASSSTDEV

Standard deviation of number of points with pass disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GDROAD

Number of points with road disturbance

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GDROADMEAN

Mean number of points with road disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GDROADSTDEV

LCTA Data Element/Entity Reference

LCTA System

Standard deviation of number of points with road disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GDTRAIL

Number of points with foot trail disturbance

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCSDPLOTSUM*

GDTRAILMEAN

Mean number of points with foot trail disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *PCSDYEARSUM*

GDTRAILSTDEV

Standard deviation of number of points with foot trail disturbance

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *PCSDYEARSUM*

GENMAP

LCTA Data Element/Entity Reference

LCTA System

General plot location map

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Bitmap or TIFF format*

Missing/Invalid: *N/A*

Used By: *PLOTMAPS*

GENUS

Species genus

SQL Data Type: *CHAR*

SQL Type Qualifiers: *20*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database Genus*

Missing/Invalid: *N/A*

Used By: *HERBRUM*

Used By: *PLNTLIST*

Used By: *VERTLIST*

GNDCOV

Monitoring ground cover code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *2*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *(P)lant, (L)itter, (B)are, (R)ock*

Missing/Invalid: *N/A*

Used By: *GNDCOV_CODE*

Used By: *LINEMON*

GNDCOV_DEF

Monitoring ground cover code definition

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Plant, Litter, Bare, Rock*

Missing/Invalid: *N/A*

Used By: *GNDCOV_CODE*

LCTA Data Element/Entity Reference
LCTA System

GNDCOV_NOTE

Ground cover category note

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *GNDCOV_CODE*

GRAZING

Number of plots with grazing

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

GULLY

Number of plots with observed gully erosion

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

HABDIVIS

Habitat divisor in USLE calculations

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

LCTA Data Element/Entity Reference

LCTA System

HABIT

Habit code, from SCS PLANTS database

SQL Data Type: CHAR

SQL Type Qualifiers: 6

Default Nullity: NULL

Derived Data: F

Valid Entries: Text

Missing/Invalid: N/A

Used By: HERBRIMUM

HAY

Number of plots with hay use

SQL Data Type: INTEGER

SQL Type Qualifiers:

Default Nullity: NULL

Derived Data: T

Valid Entries: Integer

Missing/Invalid: N/A

Used By: LANDUSEYEARSUM

HERPNOTE

Plot note for herp survey

SQL Data Type: VARCHAR

SQL Type Qualifiers: 100

Default Nullity: NULL

Derived Data: F

Valid Entries: Text

Missing/Invalid: N/A

Used By: HERPSURV

HT1TO2

Number of hits in height category 1 to 2 m

SQL Data Type: INTEGER

SQL Type Qualifiers:

Default Nullity: NULL

Derived Data: T

Valid Entries: Integer

Missing/Invalid: N/A

Used By: TACTCONA

LCTA Data Element/Entity Reference
LCTA System

HT2TO3

Number of hits in height category 2 to 3 m

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *TACTCONA*

HT3TO4

Number of hits in height category 3 to 4 m

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *TACTCONA*

HTGT4

Number of hits in height category greater than 4 m

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *TACTCONA*

HTMINTO1

Number of hits in height category minimum to 1 m

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *TACTCONA*

LCTA Data Element/Entity Reference

LCTA System

IMPACT

Impact on training

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*

Used By: *ENVCONST*

INLOC

Installation location

SQL Data Type: *CHAR*

SQL Type Qualifiers: *40*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *State and country*

Missing/Invalid: *N/A*

Used By: *INSTMAST*

INNAME

Installation name

SQL Data Type: *CHAR*

SQL Type Qualifiers: *30*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Correct installation name*

Missing/Invalid: *N/A*

Used By: *INSTMAST*

INSIZE

Installation size

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *installation size in acres*

Missing/Invalid: *N/A*

Used By: *INSTMAST*

LCTA Data Element/Entity Reference
LCTA System

INSTALID

Installation code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *3*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Three letter installation code*

Missing/Invalid: *N/A*

Used By: *AERCOVER*

Used By: *BASALA*

Used By: *BELTMON*

Used By: *BELTSURV*

Used By: *BELTTRAN*

Used By: *BIRDS*

Used By: *BIRDSURV*

Used By: *CLIMATEDATA*

Used By: *CLIMATESTATIONS*

Used By: *COMMCLASSPLOTSUM*

Used By: *ENVCONST*

Used By: *EROSEVID*

Used By: *EROSION*

Used By: *F_COUNT*

Used By: *GNDCOVER*

Used By: *GROUPING*

Used By: *HERBRJUM*

Used By: *HERPS*

Used By: *HERPSURV*

Used By: *HISTORY*

Used By: *INSTMAST*

Used By: *LANDUSE*

Used By: *LANDUSEYEARSUM*

Used By: *LINEMON*

Used By: *MAINTACT*

Used By: *MAMMALS*

Used By: *MAMSURV*

Used By: *MAPS*

Used By: *PCSDPLOTSUM*

Used By: *PCSDYEARSUM*

Used By: *PCTTYEARSUM*

Used By: *PLOTMAPS*

Used By: *PLOTMAST*

Used By: *PLOTSURV*

Used By: *SOILLS*

Used By: *SOILSMPL*

Used By: *TACTCONA*

INSTNOTE

Installation note

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *254*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text or numbers*

Missing/Invalid: *N/A*

LCTA Data Element/Entity Reference

LCTA System

Used By: *HISTORY*

INVTYPE

Inventory type

SQL Data Type: *CHAR*

SQL Type Qualifiers: *2*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *(I)nventory, (M)onitoring, (L)ong term monitoring*

Missing/Invalid: *N/A*

Used By: *PLOTSURV*

KCAL

Calculated erodibility (K) value (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *SCS K value (calculated)*

Missing/Invalid: *-1*

Used By: *EROSION*

KCALEROSINDEX

Erosion index using calculated erodibility value (K)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *EROSION*

KPUB

SCS Published erodibility (K) value (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *SCS K value*

Missing/Invalid: *N/A*

LCTA Data Element/Entity Reference

LCTA System

Used By: *EROSION*

KPUBEROSINDEX

Erosion index using published erodibility (K) (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

LABK

Erodibility (K) value calculated with sample data (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *SCS K value*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

LANDUSE

Plot land use code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *16*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid military or non-military use*

Missing/Invalid: *N/A*

Used By: *LANDUSE*

Used By: *LANDUSE_CODE*

LANDUSE_DEF

Landuse code definition

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid landuse code definition*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *LANDUSE_CODE*

LANDUSE_NOTE

Note on landuse code

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Alphanumeric*

Missing/Invalid: *N/A*
Used By: *LANDUSE_CODE*

LEALLOBS

Number of plots with land use showing erosion evidence

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

LEALLVIS

Number of plots with land use other than NONE showing erosion evidence

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

LEWAOBS

Number of plots with land use showing water erosion evidence

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

LCTA Data Element/Entity Reference
LCTA System

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

LEWAVIS

Number of plots with land use other than NONE showing water erosion evidence

SQL Data Type: *INTEGER* **SQL Type Qualifiers:**

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

LEWIOBS

Number of plots with land use showing wind erosion evidence

SQL Data Type: *INTEGER* **SQL Type Qualifiers:**

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

LEWIVIS

Number of plots with land use other than NONE showing wind erosion evidence

SQL Data Type: *INTEGER* **SQL Type Qualifiers:**

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

LIFE

Plant life pattern

SQL Data Type: *CHAR* **SQL Type Qualifiers:** *1*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *(A)nnual,(P)erennial*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *PLNTLIST*

LIFEFORM

Plant life form category

SQL Data Type: *CHAR*

SQL Type Qualifiers: *1*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *(A)nnual,(P)erennial*

Missing/Invalid: *N/A*
Used By: *TACTCONA*

LOC

Line transect location of herp trap

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *0 to 100*

Missing/Invalid: *N/A*
Used By: *HERPSURV*

LOCALITY

Description of geographic area where plant was collected

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *224*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*
Used By: *HERBRJUM*

LOCMAP

Specific location map

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Bitmap or TIFF format*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *PLOTMAPS*

LS0

Toppographic factor (LS) at transect location 0 m (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Valid LS value*

Missing/Invalid: *N/A*
Used By: *EROSION*

LS1

Toppographic factor (LS) at transect location 50 m (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Valid LS value*

Missing/Invalid: *N/A*
Used By: *EROSION*

LS2

Toppographic factor (LS) at transect location 100 m (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Valid LS value*

Missing/Invalid: *N/A*
Used By: *EROSION*

LSM

Mean topographic factor (LS) of 3 transects (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Valid LS value*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *EROSION*

MAINNOTE

Plot maintenance note

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *254*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*
Used By: *MAINTACT*

MAINTAIN

Plot maintenance code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *16*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid maintenance activity*

Missing/Invalid: *N/A*
Used By: *MAINTACT*
Used By: *MAINT_CODE*

MAINTAIN_DEF

Maintenance code definition

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid maintenace code definition*

Missing/Invalid: *N/A*
Used By: *MAINT_CODE*

MAINTAIN_NOTE

Maintenance activity code note

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Alphanumeric*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *MAINT_CODE*

MAMNOTE

Plot note for mammal survey

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*
Used By: *MAMSURV*

MANONE

Number of plots with no maintenance activity

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

MAOBS

Number of plots with maintenance recorded

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

MAOTHER

Number of plots with "other" maintenance

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: N/A
Used By: LANDUSEYEARSUM

MAP

A map image

SQL Data Type: LONG_VARCHAR SQL Type Qualifiers:

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: Valid image type

Missing/Invalid: N/A
Used By: MAPS

MAPNAME

User supplied map name

SQL Data Type: VARCHAR SQL Type Qualifiers: 32

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: Text

Missing/Invalid: N/A
Used By: MAPS

MATED_STATUS

Bird species mated status code

SQL Data Type: CHAR SQL Type Qualifiers: 2

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: (*)Singing male,(PR)Adult male/female pair,(M)Nonsinging male,(F)Female onl

Missing/Invalid: N/A
Used By: BIRDS
Used By: MATED_STATUS_CODE

MCCCODE

Most common community (MCC) classification code

SQL Data Type: CHAR SQL Type Qualifiers: 8

Default Nullity: NULL

Derived Data: T

Valid Entries: Valid Most Common Classification code

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *COMMCLASSPLOTSUM*

MCCTYPE

Most common community (MCC) classification type

SQL Data Type: *CHAR* **SQL Type Qualifiers:** *4*

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Valid Most Common Classification type*

Missing/Invalid: *N/A*
Used By: *COMMCLASSPLOTSUM*

MEALLOBS

Number of plots with maintenance activities showing erosion evidence

SQL Data Type: *INTEGER* **SQL Type Qualifiers:**

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

MEALLVIS

Number of plots with maintenance activities other than NONE showing erosion evidence

SQL Data Type: *INTEGER* **SQL Type Qualifiers:**

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

MEASURE_PT

Line location of bird survey data location

SQL Data Type: *CHAR* **SQL Type Qualifiers:** *2*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *(LO)Line-out, (LI)Line-in, (EP)End-point, (C)Combined, (U)Unknown, (NR)Not reco*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *BIRDS*
Used By: *POINT_CODE*

METHOD

Vertebrate collection method

SQL Data Type: *CHAR* SQL Type Qualifiers: *3*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *(O)bserved,(S)ighting,(T)rapped*

Missing/Invalid: *N/A*
Used By: *HERPS*
Used By: *MAMMALS*
Used By: *METHODS_CODE*

METHOD_DEF

Vertebrate collection method code definition

SQL Data Type: *CHAR* SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Observed,Sighting,Trapped*

Missing/Invalid: *N/A*
Used By: *METHODS_CODE*

METHOD_NOTE

Vertebrate collection notes

SQL Data Type: *VARCHAR* SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*
Used By: *METHODS_CODE*

MEWAOBS

Number of plots with maintenance activities showing water erosion evidence

SQL Data Type: *INTEGER* SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MEWAVIS

Number of plots with maintenance activities other than NONE showing water erosion evidence

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MEWIOBS

Number of plots with maintenance activities showing wind erosion evidence

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MEWIVIS

Number of plots with maintenance activities other than NONE showing wind erosion evidence

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MISCMAP

Additional maps

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Bitmap or TIFF format*

Missing/Invalid: *N/A*

Used By: *PLOTMAPS*

MITIGATION

Mitigation strategies

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*

Used By: *ENVCONST*

MNONE

Number of plots with no military activity

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MOBS

Number of plots with military activity recorded

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MOTHER

Number of plots with "other" military activity

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MOW

Number of plots with mowing

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

MSAND

Soil analysis of medium sand

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

MSTATUS_DEF

Bird species mated status code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: **,PR,M,F,U,Y,FL,C,NR*

Missing/Invalid: *N/A*

Used By: *MATED_STATUS_CODE*

MSTATUS_NOTE

Mated status code note

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Alphanumeric*

Missing/Invalid: *N/A*

Used By: *MATED_STATUS_CODE*

NMNONE

Number of plots with no nonmilitary activity

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

NMOBS

Number of plots with nonmilitary activity recorded

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

NMOTHER

Number of plots with nonmilitary "other" activity

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

NUM

Number of bird, mammal, or herp species sited/trapped

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

LCTA Data Element/Entity Reference

LCTA System

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BIRDS*

Used By: *HERPS*

Used By: *MAMMALS*

OBS

Total number of observation per group

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCTYEARSUM*

OPT_REAL

Optional belt variable, usually DBH

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real numbers*

Missing/Invalid: *N/A*

Used By: *BELTRAN*

OPT_TEXT

Optional line variable

SQL Data Type: *CHAR*

SQL Type Qualifiers: 8

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *GNDCOVER*

Used By: *LINEMON*

OPT_TEXT1

Optional variable 1

SQL Data Type: *CHAR*

SQL Type Qualifiers: 8

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *F_COUNT*

OPT_TEXT2

Optional variable 2

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *F_COUNT*

OPT_TEXT3

Optional variable 3

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *F_COUNT*

OPT_TEXT4

Optional variable 4

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *F_COUNT*

OPT_TEXT5

Optional variable 5

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *F_COUNT*

ORDERS

Order of the Species

SQL Data Type: *CHAR*

SQL Type Qualifiers: *20*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database Order*

Missing/Invalid: *N/A*

Used By: *VERTLIST*

ORGCARB

Walkley-Black organic carbon

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

ORMATT

Soil analysis of organic matter

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

PADB

Presence:Absence (PA) dwarfshrub broadleaf

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

LCTA Data Element/Entity Reference
LCTA System

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PADC

Presence: Absence (PA) dwarfshrub conifer

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PAERCOV

Percent aerial cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *EROSION*

PAFA

Presence: Absence (PA) forb annual

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PAFP

Presence: Absence (PA) forb perennial

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

LCTA Data Element/Entity Reference
LCTA System

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PAGA

Presence: Absence (PA) grass annual

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PAGP

Presence: Absence (PA) grass perennial

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PAH

Presence: Absence (PA) halfshrub

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PANEVAP

Pan evaporation

SQL Data Type: *float*

SQL Type Qualifiers:

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Float*

Missing/Invalid: *N/A*

Used By: *CLIMATEDATA*

PASB

Presence: Absence (PA) shrub broadleaf

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PASC

Presence: Absence (PA) shrub conifer

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PATB

Presence: Absence (PA) tree broadleaf

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PATC

Presence: Absence (PA) tree conifer

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PCCCODE

Plant community classification code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Valid classification code*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PCCTYPE

Plant community classification type

SQL Data Type: *CHAR*

SQL Type Qualifiers: *4*

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *(A)nnual,(P)erennial,(B)roadleaf,(C)oniferous,(M)ixed*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

PCTTKCAL

USLE percent of T using Kcal

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

PCTTKPUB

USLE percent of T using Kpub

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

LCTA Data Element/Entity Reference LCTA System

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

PERIOD

Period of measurements (AM or PM)

SQL Data Type: *CHAR*

SQL Type Qualifiers: *4*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *AM, PM*

Missing/Invalid: *N/A*

Used By: *BIRDS*

PERM_CLASS

Soil permeability class

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

PGNDCOV

Percent ground cover

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *EROSION*

PH1TO1

pH, 1:1 Soil-water suspension

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

PH1TO2

pH, 1:2 Soil-CACL2 Suspension

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

PHOTOS

Plot photos

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Bitmap or TIFF format*

Missing/Invalid: *N/A*

Used By: *PLOTMAPS*

PLANT

Number of plots with planting

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

PLANTHT

Belt transect plant height

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *BELTTRAN*

PLDATE

Initial plot allocation date

SQL Data Type: *DATE*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid date*

Missing/Invalid: *N/A*

Used By: *PLOTMAST*

PLOTID

Plot identification number

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *AERCOVER*

Used By: *BASALA*

Used By: *BELTMON*

Used By: *BELTSURV*

Used By: *BELTTRAN*

Used By: *BIRDS*

Used By: *BIRDSURV*

Used By: *COMMCLASSPLOTSUM*

Used By: *EROSEVID*

Used By: *EROSION*

Used By: *F_COUNT*

Used By: *GNDCOVER*

Used By: *GROUPING*

Used By: *HERPS*

Used By: *HERPSURV*

Used By: *LANDUSE*

Used By: *LINEMON*

Used By: *MAINTACT*

Used By: *MAMMALS*

Used By: *MAMSURV*

Used By: *PCSDPLOTSUM*

Used By: *PLOTMAPS*

Used By: *PLOTMAST*

Used By: *PLOTSURV*

Used By: *SOILLS*

Used By: *SOILSMPL*

Used By: *TACTCONA*

LCTA Data Element/Entity Reference

LCTA System

PLOTNOTE

Plot comments

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*

Used By: *PLOTSURV*

PLOTTYPE

Plots core:special use flag

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *(C)ore, (S)pecial use*

Missing/Invalid: *N/A*

Used By: *BIRDSURV*

Used By: *HERPSURV*

Used By: *MAMSURV*

Used By: *PCSDPLOTSUM*

Used By: *PLOTSURV*

POINT_DEF

Line location code of bird survey data definition

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Line-out, Line-in, End-point, Combined, Unknown, Not recorded*

Missing/Invalid: *N/A*

Used By: *POINT_CODE*

POINT_NOTE

Note on measure_pt code

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *POINT_CODE*

PREBURN

Number of plots with prescribed burn

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*
Used By: *LANDUSEYEARSUM*

PRECIP

Precipitation in inches

SQL Data Type: *float*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Float*

Missing/Invalid: *N/A*
Used By: *MAMSURV*

PUBLK

SCS published erodibility value (K) for soil series (USLE factor)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *SCS K value*

Missing/Invalid: *N/A*
Used By: *SOILMAST*

RAIN

Weekly rain fall

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Real number*

LCTA Data Element/Entity Reference

LCTA System

Missing/Invalid: *N/A*
Used By: *CLIMATEDATA*

REALISM

Loss of training realism

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*
Used By: *ENVCONST*

RECDATE

Plot survey date

SQL Data Type: *DATE*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid date*

Missing/Invalid: *N/A*
Used By: *AERCOVER*
Used By: *BASALA*
Used By: *BELTMON*
Used By: *BELTSURV*
Used By: *BELTRAN*
Used By: *BIRDS*
Used By: *BIRDSURV*
Used By: *CLIMATEDATA*
Used By: *ENVCONST*
Used By: *EROSEVID*
Used By: *F_COUNT*
Used By: *GNDCOVER*
Used By: *HERPS*
Used By: *HERPSURV*
Used By: *HISTORY*
Used By: *LANDUSE*
Used By: *LINEMON*
Used By: *MAINTACT*
Used By: *MAMMALS*
Used By: *MAMSURV*
Used By: *PLOTSURV*
Used By: *SOILLS*

RECORDER

Plot recorder

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HISTORY*

Used By: *PLOTSURV*

RESEARCH

Research needs

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*

Used By: *ENVCONST*

RESTRAINT

Environmental constraint/restraint

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*

Used By: *ENVCONST*

RETRAP

Number of retrapped mammals or herps

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *HERPS*

Used By: *MAMMALS*

RVAL

Rainfall erosivity (R) value for recorder

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

LCTA Data Element/Entity Reference

LCTA System

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *SCS R value*

Missing/Invalid: *N/A*

Used By: *EROSION*

Used By: *PLOTMAST*

SCOURING

Number of plots with observed scouring erosion

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

SEED

Number of plots with seeding

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

SEX

Wildlife gender code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *1*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *(M)ale, (F)emale, (U)nkknown, (C)ombined, (NR)not recorded*

Missing/Invalid: *N/A*

Used By: *GENDER_CODE*

Used By: *HERPS*

Used By: *MAMMALS*

SEX_DEF

Gender code definition

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Male, Female, Unknown, Combined, Not recorded*

Missing/Invalid: *N/A*

Used By: *GENDER_CODE*

SEX_NOTE

Note on gender code

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *GENDER_CODE*

SHEET

Number of plots with observed sheet erosion

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

SIDE

Plant belt side location

SQL Data Type: *CHAR*

SQL Type Qualifiers: *1*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *(L)eft, (R)ight*

Missing/Invalid: *N/A*

Used By: *BELTSURV*

Used By: *BELTTRAN*

SIDEDIST

Plant belt side distance

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *BELTTRAN*

SLOPE

Plot slope

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILLS*

SLPLEN

Plot slope length

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *SOILLS*

SOILCAT

Soil category number for running GRASS output

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, Integer*

Missing/Invalid: *N/A*

Used By: *SOILMAST*

SOILDPTH

Average plot soil depth

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *CHAR*

SQL Type Qualifiers: 3

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *0,0-1, 1-2, 2-3, 3-4, >4*

Missing/Invalid: *N/A*

Used By: *PLOTSURV*

SOILNAME

Plot soil series name

SQL Data Type: *CHAR*

SQL Type Qualifiers: 40

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *SCS soil name*

Missing/Invalid: *N/A*

Used By: *SOILMAST*

SOILNOTE

Misc. soil notes

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: 254

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

SOILSER

Plot soil series code

SQL Data Type: *CHAR*

SQL Type Qualifiers: 8

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *SCS soil series*

Missing/Invalid: *N/A*

Used By: *PLOTMAST*

Used By: *SOILMAST*

SOILTOPO

Geology, soil, topography

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: 150

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

SPEC

Species name

SQL Data Type: *CHAR*

SQL Type Qualifiers: 25

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Speices database species*

Missing/Invalid: *N/A*

Used By: *PLNTLIST*

Used By: *VERTLIST*

SPECIES

Herbrium table species information (extended)

SQL Data Type: *char*

SQL Type Qualifiers: 35

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid species information*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

STATESTAT

Current status as State endangered (SE), other State status

SQL Data Type: *CHAR*

SQL Type Qualifiers: 6

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid State T&E code*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

Used By: *STATE_STATUS*

STATESTAT_DEF

State status code definition

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *50*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Vale State T&E code definition*

Missing/Invalid: *N/A*

Used By: *STATE_STATUS*

STATESTAT_NOTE

State status code notes

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *100*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *STATE_STATUS*

STATION

Climate station ID

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *CLIMATEDATA*

Used By: *CLIMATESTATIONS*

STATIONNAME

Climate station name

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *130*

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Valid climate station name*

Missing/Invalid: *N/A*

Used By: *CLIMATESTATIONS*

STATION_COMMENT

Comments for climate stations

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: VARCHAR

SQL Type Qualifiers: 100

Default Nullity: NULL

Derived Data: F

Valid Entries: Alphanumeric

Missing/Invalid: N/A

Used By: CLIMATESTATIONS

STATUS

Observed erosion status code

SQL Data Type: CHAR

SQL Type Qualifiers: 16

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: Valid erosion status code

Missing/Invalid: N/A

Used By: EROSEVID

Used By: EROS_CODE

STATUS_DEF

Observed erosion code definition

SQL Data Type: CHAR

SQL Type Qualifiers: 35

Default Nullity: NOT NULL

Derived Data: F

Valid Entries: Valid erosion status code definition

Missing/Invalid: N/A

Used By: EROS_CODE

STATUS_NOTE

Note on observed erosion status code

SQL Data Type: VARCHAR

SQL Type Qualifiers: 100

Default Nullity: NULL

Derived Data: F

Valid Entries: Text

Missing/Invalid: N/A

Used By: EROS_CODE

STRUCT_CODE

Soil structure code used to calculate K-value

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

SUBFAM

Vertebrate subfamily

SQL Data Type: *CHAR*

SQL Type Qualifiers: *15*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database Subfamily*

Missing/Invalid: *N/A*

Used By: *VERTLIST*

SUBORDER

Vertebrate suborder

SQL Data Type: *CHAR*

SQL Type Qualifiers: *15*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database Suborder*

Missing/Invalid: *N/A*

Used By: *VERTLIST*

SUBSPEC

Plant subspecies

SQL Data Type: *CHAR*

SQL Type Qualifiers: *20*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database Subspecies*

Missing/Invalid: *N/A*

Used By: *PLNTLIST*

SURVEYOR

Plot surveyor

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *PLOTSURV*

SYNAUTH

Author of synonym variety or subspecies

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *150*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

SYNGENUS

Synonym genus

SQL Data Type: *CHAR*

SQL Type Qualifiers: *20*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

SYNSPP

Synonym species

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

SYNVARAUTH

Author of synonym variety or subspecies

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *150*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

SYNVAR_SSP

Synonym variety or subspecies

SQL Data Type: *CHAR*

SQL Type Qualifiers: *35*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

T

Soil series soil loss tolerance (T) value

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *SCS T value*

Missing/Invalid: *N/A*

Used By: *EROSION*

Used By: *SOILMAST*

T00TO50

Percent of plots with soil loss tolerance (T) values from 0 to 50

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCTYEARSUM*

T100TO150

Percent of plots with soil loss tolerance (T) values from 100 to 150

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCTTYEARSUM*

T150TO200

Percent of plots with soil loss tolerance (T) values from 150 to 200

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCTTYEARSUM*

T50TO100

Percent of plots with soil loss tolerance (T) values from 50 to 100

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCTTYEARSUM*

TCDB

Total count dwarfshrub broadleaf

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCDC

Total count dwarfshrub conifer

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCFA

Total count forb annual

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCFP

Total count forb perennial

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCGA

Total count grass annual

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCGP

Total count grass perennial

LCTA Data Element/Entity Reference
LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCH

Total count halfshrub

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCSB

Total count shrub broadleaf

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCSC

Total count shrub conifer

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCTB

Total count tree broadleaf

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TCTC

Total count tree conifer

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *COMMCLASSPLOTSUM*

TEMP

Temperature

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BIRDSURV*

TEMPMAX

Maximum temperature

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *CLIMATEDATA*

Used By: *HERPSURV*

Used By: *MAMSURV*

TEMPMIN

Minimum temperature

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *CLIMATEDATA*

Used By: *HERPSURV*

Used By: *MAMSURV*

TGT200

Percent of plots with soil loss tolerance (T) values greater than 200

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *PCTYEARSUM*

TILL

Number of plots with tillage

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

TOTCLAY

Percent total clay

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

TOTSAND

Percent total sand

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

TOTSILT

Percent total silt

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

TRACK

Percent of plots with evidence of tracked vehicles

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

TRAIN

Plot training area

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *PLOTSURV*

TRANLOC

Transect location

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real (0.0-100.0)*

Missing/Invalid: *N/A*

Used By: *BASALA*

Used By: *SOILLS*

TRAPNIGHTS

*Number of trap nights (number of traps * number of nights)*

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *MAMSURV*

TRAPS

Types of traps used for small mammal survey

SQL Data Type: *CHAR*

SQL Type Qualifiers: *25*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *MAMSURV*

TSTYPE

Broadleaf:coniferous type

SQL Data Type: *CHAR*

SQL Type Qualifiers: *1*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *(B)roadleaf,(C)oniferous*

Missing/Invalid: *N/A*

Used By: *PLNTLIST*

UNIT

Units affected

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *LONG_VARCHAR*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, number*

Missing/Invalid: *N/A*

Used By: *ENVCONST*

UPDATENO

Update version of information

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *ENVCONST*

USENOTE

Land use note

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *254*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text, numbers*

Missing/Invalid: *N/A*

Used By: *LANDUSE*

USGS

USGS quadrangle name

SQL Data Type: *CHAR*

SQL Type Qualifiers: *24*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *USGS quad name*

Missing/Invalid: *N/A*

Used By: *PLOTMAST*

USLE0KCAL

USLE (at location 0 using calculated K)

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *EROSION*

USLE0KPUB

USLE (at transect location 0 using pub K)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

USLE1KCAL

USLE (at location 50 using calculated K)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *EROSION*

USLE1KPUB

USLE (at transect location 50 using pub K)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

USLE2KCAL

USLE (at location 100 using calculated K)

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *-1*

Used By: *EROSION*

USLE2KPUB

USLE (at transect location 100 using pub K)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

USLEMKCAL

USLE (mean of 3 transects using calculated K)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

USLEMKPUB

USLE (mean of 3 transects using pub K)

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *EROSION*

VARAUTH

Author of variety or subspecies

LCTA Data Element/Entity Reference

LCTA System

SQL Data Type: *VARCHAR*

SQL Type Qualifiers: *150*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *HERBRIUM*

VARIETY

Plant Variety

SQL Data Type: *CHAR*

SQL Type Qualifiers: *20*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database variety*

Missing/Invalid: *N/A*

Used By: *PLNTLIST*

VCSAND

Soil analysis of very coarse sand

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

VEGCOND

Plant condition

SQL Data Type: *CHAR*

SQL Type Qualifiers: *1*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *(L)ive,(D)ead,(S)tag*

Missing/Invalid: *N/A*

Used By: *BELTMON*

Used By: *BELTSURV*

Used By: *BELTTRAN*

Used By: *GNDCOVER*

Used By: *TACTCONA*

VEGHT

LCTA Data Element/Entity Reference

LCTA System

Aerial plant height name

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *AERCOVER*

VEGID

Plant species code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database plant code*

Missing/Invalid: *N/A*

Used By: *AERCOVER*

Used By: *BELTMON*

Used By: *BELTRAN*

Used By: *GNDCOVER*

Used By: *HERBRIUM*

Used By: *PLNTLIST*

Used By: *TACTCONA*

VEGLOC

Transect location along line

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NOT NULL*

Derived Data: *F*

Valid Entries: *Real number (0.0-100.0)*

Missing/Invalid: *-1*

Used By: *AERCOVER*

Used By: *BELTRAN*

Used By: *F_COUNT*

Used By: *GNDCOVER*

Used By: *LINEMON*

VEGTYPE

General plot vegetation type

SQL Data Type: *CHAR*

SQL Type Qualifiers: *30*

Default Nullity: *NULL*

LCTA Data Element/Entity Reference

LCTA System

Derived Data: *F*

Valid Entries: *Text*

Missing/Invalid: *N/A*

Used By: *PLOTSURV*

VERTID

Vertebrate species code

SQL Data Type: *CHAR*

SQL Type Qualifiers: *8*

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Species database animal code*

Missing/Invalid: *N/A*

Used By: *BIRDS*

Used By: *HERPS*

Used By: *MAMMALS*

Used By: *VERTLIST*

VFSAND

Soil analysis of very fine sand

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

WANONE

Number of plots with no water erosion

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

WAOBS

Number of plots with water erosion recorded

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

LCTA Data Element/Entity Reference

LCTA System

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

WAPEDPLNT

Number of plots with water pedestal plant erosion

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

WHEEL

Number of plots with wheel traffic

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

WIND

Wind speed

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *BIRDSURV*

Used By: *HERPSURV*

WINONE

Number of plots with no wind erosion

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

LCTA Data Element/Entity Reference
LCTA System

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

WIOBS

Number of plots with wind erosion recorded

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

WIPEDPLNT

Number of plots with wind pedestal plant erosion

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *T*

Valid Entries: *Integer*

Missing/Invalid: *N/A*

Used By: *LANDUSEYEARSUM*

WT20TO75M

20-75 mm weight percentage of soil < 75 mm

SQL Data Type: *REAL*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

WT2TO5MM

2-5 mm weight percentage of soil < 75 mm

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

LCTA Data Element/Entity Reference

LCTA System

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

WT5TO20MM

5-20 mm weight percentage of soil < 75 mm

SQL Data Type: *FLOAT*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Real number*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

YR

Sample year

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Year (yyyy)*

Missing/Invalid: *N/A*

Used By: *SOILSMPL*

ZONE

Universal Trasverse Mercator zone

SQL Data Type: *INTEGER*

SQL Type Qualifiers:

Default Nullity: *NULL*

Derived Data: *F*

Valid Entries: *Valid UTM zone*

Missing/Invalid: *N/A*

Used By: *CLIMATESTATIONS*

Used By: *PLOTMAST*

Appendix D: Data Definition Language (DDL)

Data Definition Language (DDL) is used by the database administrator to define tables, columns, column constraints, unique rules, and referential integrity constraints. The user in most cases will have no use for the DDL, it is only presented here for reference. However, this information can be used to construct a new LCTA database, communicate with others who wish to use the data, or create a LCTA database in another relational database system. The format of the DDL presented here is specific to SQLBase but should be similar to other database management systems following SQL standards.

```
